USRP X300 and X310 Product Overview

The Ettus Research USRP X300 and X310 are high-performance, scalable software defined radio (SDR) platforms for designing and deploying next generation wireless communications systems. The hardware architecture combines two extended bandwidth daughterboard slots covering DC – 6 GHz with up to 160MHz of baseband bandwidth, multiple high-speed interface options (PCIe, Dual 1/10 GigE), and a large user-programmable Kintex-7 FPGA in a convenient desktop or rack-mountable half-wide 1U form factor. In addition to providing best-in-class hardware performance, the open source software architecture of the USRP X300 and X310 provides cross-platform UHD driver support making it compatible with a large number of USRP supported development frameworks, reference architectures, and open source projects.
